

GROWN BY SOD GROWERS ACROSS THE U.S.A.

**Jonathan Green**  
QUALITY LAWN SINCE 1881

# BLACK BEAUTY

## ULTRA

SUPREME GRASS SEED MIXTURE

**OUR MOST DROUGHT TOLERANT MIXTURE**  
for sun & shade areas

**WAXY COATING ON THE LEAVES**  
preserves moisture when hot

**ROOTS THAT CAN GROW UP TO 4' DEEP**  
for superior drought tolerance

Black Beauty Ultra is Jonathan Green's BEST grass seed mixture! This elite mix is grown by leading sod growers across the United States. Black Beauty Ultra contains "ultra-premium" varieties proven to produce high quality turf under the most diverse conditions. The seed grows well in full sun to medium shaded areas and should germinate in 10 to 14 days.

Black Beauty Ultra exhibits dark-green color, can grow roots up to four feet deep, contains a waxy leaf coating to preserve moisture, displays a uniform (non-clumpy) growth habit, and naturally withstands many insects and diseases. After you grow it, you'll agree, "Once you've seen a Black Beauty Lawn, you'll never forget it!"

**CAUTION:** Do not apply this grass seed on horse pastures or livestock grazing areas!

**"A REVOLUTIONARY APPROACH TO LAWN CARE"**

**U**se genetically superior grass seed  
**S**top soil compaction and stimulate soil microbes  
**A**adjust soil pH  
with **Black Beauty Grass Seed** and **MAG-I-CAL Plus Soil Food**.

By following the New American Lawn Plan, you will be creating ideal conditions in the lawn soil whereby your Black Beauty lawn can thrive. A healthy growing Black Beauty lawn is your best defense against future lawn problems; it can help to reduce your use of weed, insect and fungus control products.

**DIRECTIONS**

SUCCESSFUL SEEDING CAN BE ACCOMPLISHED IF THESE PROCEDURES ARE FOLLOWED FOR BOTH OVERSEEDING LAWN AND ESTABLISHING NEW LAWN OR SODDING.

- 1. PREPARATION:** Good seed-to-soil contact is very important in order to achieve good germination of the planted grass seed.
  - Mow lawn before seeding.
  - Rake dead grass and debris and loosen the soil. Add additional topsoil if needed. For larger areas, a rented thatching machine may be easier. Apply seed to the loosened soil and then lightly rake it into the ground. Do not bury the seed more than 1/4" deep.
- Prior to seeding, apply these **Jonathan Green** products in any order, on the same day.

**Jonathan Green Veri-Green for Seeding & Sodding**  
Provides the nutrients necessary for new grass growth.

**Jonathan Green MAG-I-CAL Plus for soil compaction and pH adjustment**  
Helps loosen hard, compacted soils. Provides calcium - an essential grass plant nutrient which aids in the seedling's ability to absorb nutrients.

- Seed bed should be kept moist for a few weeks while the grass seed germinates. Mow the new grass after it has reached a height of 2-1/2 to 3 inches.  
**Consult your dealer concerning follow-up fertilizer applications and maintenance advice.**

Scotts Rotary	9	
Scotts Drop	13	

**My Pledge Of Satisfaction**  
We have made every effort in the formulation of this product to insure that you will be satisfied with the results. If, for any reason, you are not satisfied, please write and describe the problem. Our lawn specialists will make every effort to assure your success.

**Benefits of lawns:** Grass slows down and absorbs water run-off and controls soil erosion while cleansing water of impurities and dust. Grass plants remove carbon dioxide from the atmosphere. A 5,000 sq. ft. lawn produces enough oxygen for 8 people daily. Lawns cool off the immediate area, about 30 degrees cooler than asphalt and about 20 degrees cooler than bare soil. Lawns reduce noise, glare and increase your property value. Leave grass clippings, if possible, so nutrients and water go back into your lawn.
