

GROWN BY SOD GROWERS ACROSS THE U.S.A.

Jonathan Green
QUALITY LAWN SINCE 1881

BLACK BEAUTY

ULTRA

SUPREME GRASS SEED MIXTURE

OUR BEST GRASS SEED VARIETIES
for sun & shade areas

WAXY COATING ON THE LEAVES
preserves moisture when hot

ROOTS THAT CAN GROW UP TO 4' DEEP
for superior drought tolerance

Black Beauty Ultra is Jonathan Green's best grass seed mixture! This elite mix is grown by leading sod growers across the United States. Black Beauty Ultra contains "ultra-premium" varieties proven to produce high quality turf under the most diverse conditions. The seed grows well in full sun to medium shaded areas and should germinate in 10 to 14 days.

Black Beauty Ultra exhibits dark-green color, and can grow roots up to four feet deep, contains a waxy leaf coating to preserve moisture, displays a uniform (non-clumpy) growth habit, and naturally withstands many insects and diseases. "Once you've seen a Black Beauty Lawn, you'll never forget it!"

Spring plantings may take more time to germinate.

CAUTION: Do not apply this grass seed on horse pastures or livestock grazing areas!

DIRECTIONS

SUCCESSFUL SEEDING CAN BE ACCOMPLISHED IF THESE PROCEDURES ARE FOLLOWED FOR BOTH OVERSEEDING LAWN AND ESTABLISHING NEW LAWN OR SODDING.

- 1. PREPARATION:** Good seed-to-soil contact is very important in order to achieve good germination of the planted grass seed.
 - Mow lawn before seeding.
 - Rake dead grass and debris and loosen the soil. Add additional topsoil if needed. For larger areas, a rented de-thatching machine may be easier. Apply seed to the loosened soil and then lightly rake it into the ground. Do not bury the seed more than 1/4" deep.

- For best results, apply these **Jonathan Green** products in any order, on the same day.

Jonathan Green Veri-Green Starter Fertilizer for Seeding & Sodding
Provides the nutrients necessary for new grass growth.

Jonathan Green MAG-I-CAL Plus for soil compaction and pH adjustment
Helps loosen hard, compacted soils. Provides calcium - an essential grass plant nutrient which aids in the seedling's ability to absorb nutrients.

- Seed bed should be kept moist for a few weeks while the grass seed germinates. Mow the new grass after it has reached a height of 2-1/2 to 3 inches.

Consult your dealer concerning follow-up fertilizer applications and maintenance advice.

My Pledge Of Satisfaction
We have made every effort in the formulation of this product to assure that you will be satisfied with the results. If, for any reason, you are not satisfied, please write and describe the problem. Our lawn specialists will make every effort to assure your success.

Benefits of lawns: Grass slows down and absorbs water run-off and controls soil erosion while cleansing water of impurities and dust. Grass plants remove carbon dioxide from the atmosphere. A 5,000 sq. ft. lawn produces enough oxygen for 8 people daily. Lawns cool off the immediate area, about 30 degrees cooler than asphalt and about 20 degrees cooler than bare soil. Lawns reduce noise, glare and increase your property value. Leave grass clippings, if possible, so nutrients and water go back into your lawn.
